

# visAPPprot Issue Report Instructions

When you encounter issues with installation or with using the visAPPprot system itself, you are welcome to report your issues to our Github for help. Someone on the visAPPprot maintenance team will respond to your problem via Github issues. This document outlines steps for submitting an issue on Github.

## 1. Github Repository

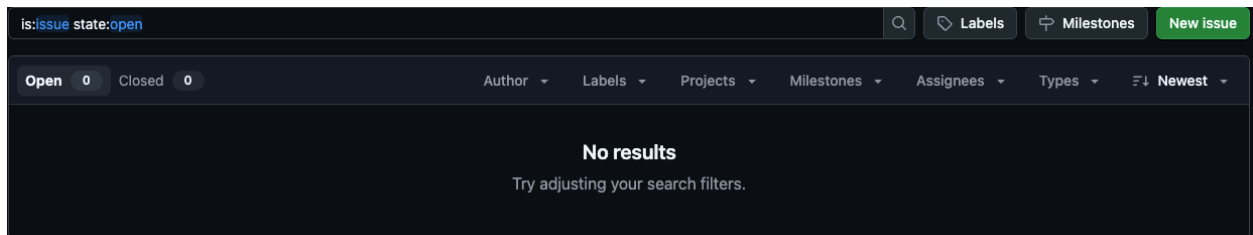

Go to our visAPPprot Github repository: <https://github.com/Blenman-Innovation-Group/visAPPprot.git>

Click on the *Issues* tab at the top, between *Code* and *Pull requests*.

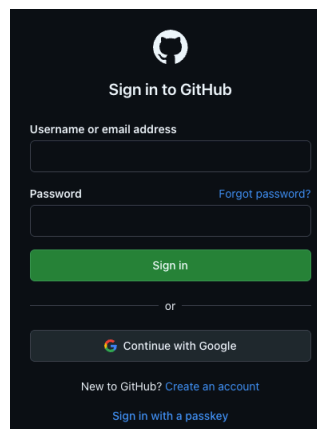

## 2. Issues Page

Click the Green “New Issue” button at the top right.

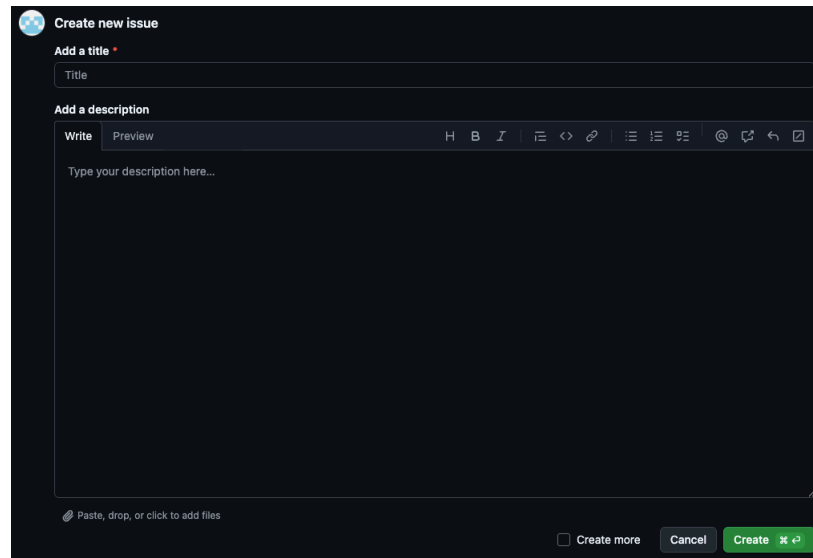

If you are not logged into your Github account, you will be directed to a page to either sign into an existing Github account, or to create a new account if you do not have one already.

## 2. Submit Issue

After logging into your account, or if you are already logged into your account, you will see the following form to submit an issue. You may drag and drop any screenshots of your issue to the form. Click the green Create button to submit your problem. **Note that all submitted Github issues are public.**

The image shows the 'Create new issue' form on GitHub. At the top, there's a header 'Create new issue' with a GitHub logo. Below it, the section 'Add a title' has a text input field labeled 'Title'. The next section is 'Add a description', which includes a 'Write' tab (selected) and a 'Preview' tab. The 'Write' tab has a rich text editor with various formatting icons (H, B, I, list, link, etc.) and a large text area with the placeholder 'Type your description here...'. At the bottom left of the form, there's a note 'Paste, drop, or click to add files' with a file icon. At the bottom right, there are three buttons: 'Create more' (disabled), 'Cancel', and 'Create' (green and highlighted).
